

Operations update

Planned Stevens Weir Pool refill

23 June 2026

WaterNSW is advising customers and the wider community of changes to water levels upstream of Stevens Weir on the Edward River. Commencing in the coming week, the weir pool will be raised and is expected to reach target operating levels by Mid-July in preparation for the upcoming irrigation season.

Please be aware that as the weir pool is raised, flows to Colligen Creek and Yallakool/Niemur and Wakool Rivers will sequentially commence via their respective offtakes.

WaterNSW is advising customers and landholders to monitor warnings and river levels closely to make necessary arrangements to ensure infrastructure and livestock are not impacted by these changes. River users should monitor water levels closely and be aware of submerged and exposed obstructions which may be hazardous due to low water levels.

The latest operational information and announcements are available on WaterNSW [Water Insights portals](#). You are able to [sign up](#) to this service which allows you to set up and receive alerts when the latest updates are released.
